Revise Schedule Type
Change from a LEC to LAB to better reflect the nature of the course. "LAB" schedule type is more appropriate for the nature of the course.

SPAN 31200- Advanced Spanish Conversation
Revise Schedule Type
Change from a LEC to LAB to better reflect the nature of the course. "LAB" schedule type is more appropriate for the nature of the course.

Communication
New Major
This major, with concentrations to be added later, will replace the current 5 majors in the Brian Lamb School of Communication. Concentrations cannot be added until the major is established.
Business Communication
New Concentration
This 15-credit concentration essentially replaces the current "Corporate Communication" major, giving students more flexibility to take other classes within the Lamb School of Communication and adding options that make the concentration more applied than the major was.

Communication of Science and Technology
New Concentration
This concentration will prepare students interested in working in communication fields related to science and technology. Students must choose 5 of the courses listed in order to complete a 15-credit concentration.

General Communication
New Concentration
This concentration allows students to assemble their own group of courses to equal 15 hours of credit. The only restrictions are that courses must be in COM, at the 200-level or higher, and they cannot also be counted in any other area of the COM major.

Health Communication
New Concentration
This concentration allows students to explore and practice health communication. Courses cover topics such as health communication campaigns, doctor/patient interaction, and working together in teams to accomplish health communication goals.

Interpersonal Communication
New Concentration
This concentration essentially replaces the existing "Human Relations" major. The concentration format and new name are intended to be more descriptive and to provide students with more flexibility to take other courses within the Brian Lamb School of Communication.

Media and Mass Communication
New Concentration
This concentration, which essentially replaces the existing major in Mass Communication, allows students to study journalism, broadcasting, and video production.

Political and Civic Communication
New Concentration
For students interested in politics or law, this concentration enables them to learn both history and argument that will prepare them to be engaged citizens.
Public Relations and Strategic Communication
New Concentration

This concentration prepares students to work in public relations and advertising, at the same time helping students become more critical consumers of external organizational messages.
